FUNCTION: PROMOTES FEMALE DEVELOPMENT IN XX ANIMALS WHERE IT EVENTION: PROMOTE SEGMENT OF THE FEM PROTEINS TO THE MEMBRANE THEREBY SEQUESTERS ONE OR MORE OF THE FEM PROTEINS TO THE MEMBRANE THEREBY FREEING THE TRA-1 PROTEIN (A PUTATIVE TRANSCRIPTION FACTOR) TO ENTER THE MUCLEUS AND PROMOTE FEMALE DEVELOPMENT. IN XO ANIMALS IT ACTS AS A RECEPTOR FOR HER-1 WHICH PREVENTS IT FROM BINDING TO FEM PROTEINS THEREBY REPRESSING THE ACTIVITY OF TRA-1. SUBCELIULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: SOMATIC AND GERM LINE TISSUES.

"Molecular cloning and complete nucleotide sequence of genomic RNA
the AIK-C strain of attenuated measles virus.";

Virus Genes 7:67-81(1993).

-i- FUNCTION: PROBABLE COMPONENT OF THE ACTIVE POLYMERASE. IT MAY
FUNCTION IN MRNA SYNTHESIS, CAPPING, METHYLATION AND POLY(A)
SYNTHESIS OF NEWLY SYNTHESIZED VIRAL MRNAS, RNA EDITING OF THE
GENE TRANSCRIPT, AND PROTEIN KINASE ACTIVITY.

-i- CAPALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +

RNA polymerase beta subunit (EC 2.7.7.48) (Large
Cattaneo R., Schmid A., Spielhofér P., Kaelin K., Baczko K., Meulen V., Pardowitz J., Flanagan S., Rima B.K., Udem S.A.; "Mutated and hypermutated genes of persistent measles viruses whice caused lethal human brain diseases."; Virology 173.415-425(1989).

-i- FUNCTION: PROBABLE COMPOUNT OF THE ACTIVE POLYMERASE. IT MAY FUNCTION IN MRNA SYNTHESIS, CAPPING, METHVLATION AND POLY (A) SYNTHESIS OF WEALY SYNTHESIS VIRAL MRNAS, RNA EDITING OF THE SYNTHESIS OF WEALY SYNTHESIS OF VIRAL MRNAS, RNA EDITING OF THE GENE TRANSCRIPT, AND PROTEIN KINASE ACTIVITY.

-i- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate {RNA}(N).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RRPL

Claim 1; Page 134; 364pp; English.

Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia Cpneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as composed in farction, cerebrovascular disease, aortic aneurysm, and stycke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the pneumoniae infections. The proteins may also be used in the detection of Chlamydia pneumoniae, and the nucleic acids may be used in pcR, branched DNA probe assay or blotting techniques for determining Chlamydia pneumoniae gene expression. The present sequence represents a composition.

C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent ocitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y3589) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The patent discloses novel cells comprising a nucleic acid encoding CC a gene product having phenylalanine hydroxylase (PAH) activity such CC as phenylalanine hydroxylase (phhA), 4-carbinolamine debydratase (phhB) and aromatic aminotransferase (phhC), which are derived CC from a prokaryotic organism. The patent also relates to fusion proteins comprising a protein enhancing and/or stabilising the proteins comprising a protein enhancing and/or stabilising the CC PAH activity in addition to PAH activity. The cells are useful CC for preparing a protein sequences of the invention are also useful CC as a milk protein derived from casein, globulin or a whey protein CC as a milk protein derived from casein, globulin or a whey protein having reduced content of phenylalanine. The method involves contacting the food product starting material with the cells or fusion proteins CC such that at least part of the phenylalanine content of the starting material is converted into compounds that do not cause phenylated for CC metabolic disorder resulting in an accumulation in the body of metabolic disorder resulting in an accumulation in the body of function. The present sequence is a protein encoded by pFUSAB vector DNA insert sequence. This sequence comprises a lacz peptide from CC Escherichia coli, a linker peptide and phhA and phhB proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The production of other cytokines in other cell populations. The polymeroleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissum growth factor activity, immunomodilatory activity and activity, tissum growth factor activity, immunomodilatory activity and activity, the useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or activin/inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Neuronal tryptophane hydroxylase; nTPH; neuronal disease; primary haemostasis deficiency; allergy; transplantation; serotonin; antiarteriosclerosis; thrombolytic; anticoagulant; immunosuppressive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Neurone specific tryptophane hydroxylase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method of influencing the level of serotonin, which involves the specific regularion of TPH (tryptophan hydroxylase) and/or neuronne-specific TPH (nTPH) activity. The method is used for the diagnosis of neuronal diseases and for treating deficient primary haemostasis. Also reducing production of serotonin is used to treat arteriosclerosis and thrombosis, particularly where associated with diabetes mellitus, and to treat excessive (or normal but unwanted) immune system responses, e.g. allergy, (auto) immune diseases, risks associated with pregnancy, particularly pre-eclampsia, and transplant rejection. The present sequence is a neurone-specific TPH protein.

                                                                                                                                                                                                                                                                                                                                                 The sequences given in AAR36740-41 represent the human and rat tyrosine hydroxylase protien respectively. These sequences may be used in the construction of a varient tyrosine hydroxylase which contains at least one amino acid substitution in the N-terminal 55 mino acids. The substitution ocrresponds to an amino acid selected from SerB, SerB1, Arg37, Arg38 (Gln39, Ser40, Leu42, Ile42, Glu43, Asg44, Ala45, Arg46 or Lys47. The enzymatic activity of the varient protein: as at least 3-fold greater than that for the wild type protein. Cells transfected with the DNA encoding these proteins may be used for treating neurological disorders associated with a deficiency in tyrosine hydroxylase or dopamine. These proteins may be used to generate antibodies specific for the varient tyrosine hydroxylases to monitor the enzyme during a treatment regimen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     118 WKS-----YCPRFFLDYLEAFGLLSDFLDH------QAVIKFFELETHFSYYPVS 161

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
This sequence represents rat tyrosine hydroxylase (TH) and may be used in the production of the varient TH molecules of the invention. These varients contain amino acid substitutions in the N-terminal portion of the molecule, and in the rat molecule these substitutions.

These varients contain amino acid substitutions in the N-terminal portion of the molecule, and in the rat molecule these substitutions.

Arg46. Varients containing one or more of these amino acid substitutions have substantially enhanced enzymatic activity compared to the wild-type enzyme. The most pref. substitution being Ser40 for Tyr or Leu. DNA encoding the TH varients, and cells card for Tyr or Leu. DNA may be used for treating diseases associated with defective function of TH, or dopamine, eg. Parkinsons disease and Alzheimers disease, and effective disorders. The cells can then compared into the brain or encapsulated in a selectively permeable polymer capsule which allows release of the cells products but protects them from attack by the hosts antibodies or cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC used in the production of the varient TH molecules of the invention. CC These varients contain amino acid substitutions in the N-terminal CC portion of the molecule, and in the human molecule these substitutions are pref. at positions Ser19, Ser31, Arg37, Arg38, CC ser40, Leu41, Glu43, Asp44, Al445, Arg46 or Lya47. Varients CC substantially enhanced enzymatic activity compared to the wild-type CC substantially enhanced enzymatic activity compared to the wild-type CC substantially enhanced enzymatic activity compared to the wild-type CC substantially enhanced enzymatic activity compared to the wild-type CC substantially enhanced enzymatic activity compared to the wild-type CC substantially enhanced enzymatic activity compared to the wild-type CC substantially enhanced enzymatic activity compared with this DNA CC may be used for treating diseases associated with defective function CC of TH, or dopamine, eg. Parkinsons disease and Alzheimers disease, and effective disorders. The cells can then be implanted into the brain or encapsulated in a selectively permeable polymer capsule which allows release of the cells products but protects them from CC attack by the hosts antibodies or cells.

Genetically modified tyrosine hydroxylase having increased activity - used for treating neurological disorders e .g. parkinson's and Allheimer's diseases and affective disorder s e.g. disorders

Disclosure; Fig 6; 20pp; English.

tyrosine hydroxylase protien respectively. These sequences may be used in the construction of a varient tyrosine hydroxylase which contains at least one amino acid substitution in the N-terminal 55 amino acids. The substitution corresponds to an amino acid selected from Ser8 Ser31, Arg37, Arg37, The enzymatic activity of the varient proteins is at least 3-fold greater than that for the wild type protein. Cells transfected with the DNA encoding these protein may be used for treating neurological disorders associated with a deficiency in tyrosine hydroxylase or dopamine. These proteins may be used to generate antibodies specific for the varient tyrosine hydroxylases to monitor the enzyme during a treatment regimen. The sequences given in AAR36740-41 represent the human and rat

Substitution of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the factor of the facto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hybrid molecules are produced by covalently linking (1) a portion (A) of the binding domain of a cell-binding ligand, allowing binding of the mol. to an animal cell; a portion (B) of a translocation domain of a protein able to translocate (C) across the cell cytoplamic membrane, and and (3) a portion (C) which is to be introduced into the cell. (A) is derived from a steroid or polypeptide hormone, a single-chair analogue of a monoclonal antibody able to bind an antigen expressed on the cell surface, or a polypeptide toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hybrid, fusion, membrane translocation, binding region; HIV; infection; toxin; steroid; hormone; monoclonal antibody; antigen; diphtheria; exctoxin; phenylketonuria; cholera; interleukin; IL-2; protease; epidermal growth factor; ricin; tetanus; hexosaminidase; Shiga-like toxin A; SLT-A; PH; ligand; insulin; nuclease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hybrid molecules for targetting chemical entity to cell - have membrane trans-locating and cell binding-regions and used to treat HIV infection, genetic enzyme-deficiency disorders etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 213.5; DB 12; Length 452; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLI6176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       389 STQYVRHVNSPYHTPEPDSIHELLGHMPLLADPSFAQFSQEIG------LASLGASD 439

This protein comprises for human phenylalanine hydroxylase (PH). A DNA molecule (see AAT91638) encoding PH was used to construct a PH-diphtheria toxin B' gene that was expressed in E. coli. The resulting hybrid protein can be used in the treatment of phenylketonuria. The active PH enzyme is targeted to, and incorporated into, the broad range of cells which native diphtheria normally attacks, achieving the widespread therapy that is needed for this inherited disorder. Claimed hybrid proteins comprise a translocation domain and a cell binding domain. They can be used for the delivery of agents (e.g. therapeutic genes, toxins, detectable labels) into cells. The use of a translocation
                                                                                                                                                                                                                                                                                                                                                                     New hybrid molecules for delivery of agents to cells - comprise a binding domain of a cell binding ligand and a portion of a translocation domain of a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Phenylalanine hydroxylase; human; hybrid protein; cell delivery; cell binding ligand; translocation domain; diphtheria toxin B';

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mechanism ensures that the hybrid will be effective in relatively low doses, since a high proportion of the substance of interest will be taken into the targeted cells. The hybrid molecules can k manufactured as a single hybrid recombinant protein, permitting reproducibility, consistency, and the precise control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                shiga-like toxin; p

Homo sapiens phenylketonuria;

16-SEP-1997

The invention relates to a recombinant DNA molecule encoding a hybrid protein comprising three parts: (a) the first part comprises a portion of a ranalocation domain of a naturally cocurring protein of the binding domain of a naturally cocurring protein of a ranalocation domain of a naturally cocurring protein comprises a portion of a translocation domain of a naturally cocurring protein coxin, which translocation domain of a naturally cocurring protein coxin, which translocate the third both in part of the across the cytoplaemic coxin, which translocate the third both of the call, and (c) the third part comprises a polypeptide entity to be introduced into the cell, which is non-native to the naturally occurring protein of (b). This sequence represents the human phenylalanine hydroxylase for use in generating the hybrid molecule enables the direction of appropriate invention. The hybrid molecule enables the direction of appropriate cortexage or affected cells, allowing them to function properly and alleviate or cure the disease. The hybrid is especially used in treating energing the missing function, to supplying the missing function, to supplying cellular levels of a particular enayme or a scarce precursor or cofactor, to direction of a praticular enayme or cortex precursor or cofactor, to direction such as particular enayme or a scarce precursor or cofactor, to direction such as (involved in the process of getting non-therapeutic substances such as contractable labels into cells.

New two-part hybrid protein comprising a translocation domain and a cell-binding domain, for treating genetic deficiency diseases, cancer and HIV infections -Example 5; Fig 13; 32pp; English.

This sequence represents the phenylalanine hydroxylase protein sequence.

The encoded protein can be included in the hybrid protein of the included in the hybrid protein of the consequence. The encoded protein can be included in the hybrid protein of the consequence is targeted to. The hybrid protein comprises a first part which is a portion of the binding domain of a call-binding ligand, effective to cause the hybrid molecule to bind to a call binding ligand, effective to part comprises a portion of a translocation domain of anturally occurring protein (e.g. the translocation domain of diphtheria toxin) the second part translocates the third part comprises a chemical and into the cytosol of the call, where each of the first and third entity to be introduced into the call, where each of the first and third entity to be introduced into the second and third part comprises a chemical covalent bond attaching the second and third part is cleavable. The phenylalanine hydroxylase protein can form part of the third portion of the translocation domain transfers the hybrid molecule across the call and the translocation domain through a cleavable bond, can then carry out its cleavable. The function. The hybrid molecules are useful for treating genetic deficiency diseases by delivering to affected calls an enzyme supplying the missing function, to supplement callained revels of a particular enzyme or a scarce precursor or cofactor, to direct toxins or other poisons to destroy particular calls (auto as adipocytes, cancer calls, or a trunslation of the complexed calls an enzyme such as a trunslations and a particular enzyme or a calls calls antibodies to viral infections.

Cod-5 is the aromatic amino acid hydroxylase that synthesises serotonin from CC precursor L tryptophan. The cod-5 gene was knocked out to produce mutants completely lacking in serotonin. These mutants were found to have defects CC in metabolic control. A number of C. elegans proteins that have mammalian homologues acting in the insulin signalling pathway were also identified. The C. elegans age-1 gene encodes a homologue of the mammalian PI 3-kinase whilst daf-2 encodes a homologue of the mammalian cC insulin receptor. The C. elegans AKT kinase and PKB kinase act downstream CC insulin receptor. The C. elegans PTEN lipid phosphatase homologue, CC insulin signalling. The C. elegans PTEN lipid phosphatase homologue, CC DAF-18, has been found to act upstream of AKT in the pathway. This CC discovery has enabled mammalian PTEN action to be mapped to the insulin CC signalling pathway. Conserved DAF motifs can be used to design probes to conclude the conserved DAF motifs can be used to design probes to predisposition towards the development of glucose intolerance conditions, and chestry and disherers.

                                                                                                                                                                                                            The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for certaining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for cidentifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to abscrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. CC The proteins are useful in genetic vaccination, testing and concerning the used as mutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in come, cartilage, tendon and/or nerve tissue growth or regeneration; to mean of leukaemias. ANU29510-ANU31304 represent the amino acid cc sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopolesis; nerve tissue regeneration; immune suppression; immune stimulation; anti-inflammatory; leukaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical daruge. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                   The invention relates to novel human secreted polypeptides. The polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to abstrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptide weetnes comprising the nucleic acids encoding the polypeptide of producing the proteins. The proteins are useful in genetic vaccination, testing and concerns are useful in genetic vaccination, testing and to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; in treatment of leukaemias. Addi29510-AdJ3304 represent the amino acid or sequences of novel human secreted proteins of the invention.

                                                                                                                                                                                                                           The patent discloses novel cells comprising a nucleic acid encoding cas gene product having phenylalanine hydroxylase (phA) activity such cas phenylalanine hydroxylase (phA), 4a-carbinolamine dehydratase (phB) and aromatic aminotransferase (phC), which are derived from a prokaryotic organism. The patent also relates to fusion proteins comprising a protein enhancing and/or stabilising the patent also relates to fusion the patent also relates to fusion the patent also relates to fusion the patent also relates to fusion the patent also relates to fusion the patent also relates and useful for producing PAH. The sequences of the invention are also useful for producing PAH. The sequences of the invention are also useful for producing PAH. The sequences of the invention are also useful for producing PAH. The sequences of the invention are also useful for producing PAH. The sequence food product (animal protein such as a milk protein derived from casein, globulin or a whey protein the food product starting material with the cells or fusion proteins cannot found that do not cause phenylketonuria material is converted into compounds that do not cause phenylketonuria (PKU) by the enzymatically active product. PAH enzyme is useful for menufacturing a medicament for treating PAH, which is an inherited menufacturing and metabolites that can cause impaired brain function. The present sequence is a peptide sequence of phhAB custom protein.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5.7%; Score 108.5; DB 22; Length 1501;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1) in the specification). ABN15762 to ABN27252 encode the human ORFX proteins given in ABP00101 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polymucleotide sequences can be used in gene therapy. ORFX sequences can be used in the sequences can be used in gene therapy. ORFX sequences can be used in the sequences can be used in gene therapy. ORFX sequences can be used in the sequences can be used in gene therapy. ORFX sequences can be used in the sequences can be used in disorders, disorders, disorders, in the transplantation, cardiovascular diseases, disorders elated to organ transplantation, cardiovascular diseases, disorders elated to organ transplantation, cardiovascular diseases, disorders infectious diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthitis, autoimmune thyroiditis, myssthenia gravis, graft-versus-host disease and autoimmune thyroiditis, myssthenia gravis, graft-versus-host useful for treating burns, incisions, ulcers for treating osteoporosis, brotection or regenerative disorders or perifodontal disease, and for gut protection or regenerative disorders, or perifodontal disease, and for gut protection or regenerative disorders, or perifodontal disease, and for gut severant repenerative disorders, or perifodontal disease, and for gut severant repenerative disorders, or perifodontal disease, and for gut severant repenerative disorders, or perifodontal disease, and for gut severant repenerative disorders, or perifodontal disease.
                                                                                                                                                                                                                                                                                       hyperproliferative disorder, psoriasis; benign tumour; haemorrhage, degenerative disorder, osteoarthritis; neurodegenerative disorder, cardiovascular disease, diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiendy; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders
                                                                                                                                                                                                                                                      Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis;
